

Flossbach von Storch - Global Convertible Bond - R

INVESTMENT STRATEGY

Flossbach von Storch - Global Convertible Bond represents a defensive alternative to pure equity investments. The convex profile of convertible bonds allows investors to take advantage of rising equity prices whilst at the same time limiting downside risks. Stock selection is based on a fundamental analysis process using in-house valuation models. If no convertible bond is available for a promising underlying security, or its structure does not match the required profile, the fund management may combine bonds and call options so as to present a similarly attractive structure. Currently foreign currency risks are largely hedged. The fund invests globally in convertible bonds. The sub-fund is actively managed. The fund manager determines, regularly reviews and, if necessary, adjusts the composition of the portfolio exclusively in accordance with the criteria specified in the investment policy. The performance of the sub-fund is compared against the index as reference. The fund manager is not bound at any time to the index in his investment decision and portfolio composition. Therefore, the performance of the sub-fund may differ significantly from the indicated reference index.

EXPLANATORY NOTES REGARDING PERFORMANCE

Past performance is no indication of current or future performance. The performance data do not take into account the commissions and costs incurred in the issue and redemption of units, which may reduce the performance. Exemplary model calculation assuming a front-end load of 5%: an investor wishes to purchase units for 1,000 EUR (or CHF). With a maximum front-end load of 5%, he must pay a one-time fee of EUR 50 (or CHF) on purchase. Custody account costs may also be incurred. Please refer to the cost details presented in this document to determine the maximum front-end load for the unit class of the subfund. Where performance is compared to a benchmark, such a comparison is provided for information purposes only and does not imply any obligation on the part of the fund manager to achieve the level of the benchmark or replicate its performance.

MONTHLY COMMENTARY

The number of vaccinations against Covid-19 is increasing. As a result, the economic outlook is brighter, and it is being supported by massive government aid packages. The global pioneer is the United States. Taking into account all deficit spending and the waiver of earnings, the US fiscal package accounts for about 25 per cent of US gross domestic product for 2020. Added to this is the support of the US Federal Reserve, which left key interest rates at 0.0 to 0.25 per cent at the April meeting and plans to continue securities purchases of around USD 120 billion a month. As a result, 10-year US Treasuries yielded 1.63 per cent at the end of April, below the level at the beginning of the month (1.74 per cent). Yields thus consolidated after the significant increase in the first quarter. The quarterly reporting season started in April, with predominantly positive reports. Against this background, share prices rose, in some cases significantly. In particular, the US stock indices, measured by the S&P 500 and the Nasdaq Composite, rose by +5.2 per cent and +5.4 per cent, respectively, while the European Euro Stoxx 50 gained +1.4 per cent. In contrast, the Japanese Nikkei 225 Index fell by -1.3 per cent. The risk premiums (credit spreads) of corporate bonds fell again slightly in this positive environment. US convertible bonds did not follow the positive development of US equities to the same extent. Accordingly, the difference to European convertibles was not as clear as for equities. The Refinitiv Global Focus Index rose by 1.3 per cent in this environment. Despite the focus on European stocks in the Fund, the unit price still gained slightly more than the index. In addition to individual position increases in April, the positions in Vishay, Michelin, GN Store, Proofpoint and Oliver/Gea in particular were sold completely. In return, the Fund participated in the new issues of Meituan, Diasorin and Snap. Equity sensitivity at fund level (including cash, call options and bonds) fell from around 40 to 36 per cent.

- » Corporates & Private Equity Analyst at NRW.BANK, Düsseldorf (2010-2016)
- » Economics degree from the University of Bonn (2003-2009)

Flossbach von Storch - Global Convertible Bond - R

OPPORTUNITIES

- + Investing in funds can deliver an attractive result at a lower level of risk compared to a direct investment in equities.
- + Income can be generated from regular interest payments.
- + Convertible bonds can increase in value when equity markets rise.
- + Derivatives can be used to increase potential yields.
- + Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.

RISKS

- Investing in convertible bonds may entail price risks, especially in the case of rising interest rates on the capital markets.
- Convertible bonds can decline in value when equity markets fall.
- Country, credit and issuer liquidity risk. Also potential exchange rate risks. If securities are illiquid (i.e. thinly traded), there is a risk that it may either not be possible to sell the assets at all or only by accepting a significant discount on the sale price.
- Where used, derivatives can have a greater negative impact on the fund value than would be the case if the assets were acquired directly. This can affect the fund's risk profile and volatility (tendency for the price to fluctuate).
- The straight concentration on special markets can have a negative impact because of the dependent performance of these selected markets.
- Investing in assets denominated in a foreign currency can have a negative impact on unit values as a result of exchange rate movements.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

CONSERVATIVE:

The fund is appropriate for conservative investors. Due to the composition of the net sub-fund assets, there is a moderate degree of risk but also a moderate degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Medium-term: 3 to 5 years

RISK/RETURN PROFILE

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The historical data used for calculating the synthetic indicator is not a reliable indication of the future risk and reward profile of the share class. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment. This share class has been placed in the aforementioned risk class because its unit price is subject to medium fluctuation, therefore the profit potential and loss exposure may be moderate. Because of the calculation model used, all risks may not be taken into consideration when placing the share class in a risk class. Detailed information can be found in the section entitled "Risks" of the prospectus.
