

Flossbach von Storch - Multiple Opportunities II - USD-RT

INVESTMENT STRATEGY

The fund pursues an active investment approach. The fund manager can invest in any investment classes that, in his/her opinion, appear to be attractive in the relevant capital market environment. The equity component amounts to at least 25 per cent. The basic principle for asset allocation is an idiosyncratic, independent view of the world. A thorough company analysis is performed to assess whether an individual investment is attractive. A determining factor for each investment decision is the risk/reward ratio. The potential for yield must considerably overcompensate for any risks of loss. The portfolio structure, and thus the fund's risk/reward profile, is aligned to the five Flossbach von Storch pentagram pillars, particularly the diversification principle. The fund is deliberately not oriented to any benchmark index. The main aim is to make attractive yields on a permanent basis. The share class is hedged against currency fluctuations in relation to the sub-fund currency.

MONTHLY COMMENTARY

Escalation, relief and renewed escalation of the trade conflict between the US and China continued to move markets in August. The conflict between the two largest economies in the world will likely continue. In our view, both countries are fighting for global hegemony and the conflict about trade surpluses and tariffs is just one of many factors. The US stock market temporarily fell more than six per cent, but recovered again at the end of the month. The drop in government bond yields was more sustained, with ten-year US Treasuries falling from two to less than 1.5 per cent. The yields on German government bonds were even deeper in negative territory. The German federal government was able to issue a 30-year bond with a negative yield for the first time, while the yields on ten-year bonds were below -0.7 per cent. This means capital markets are already strongly pricing in plans for further monetary policy loosening by the major central banks. A sharp differentiation could be observed in the stock market, with cyclical shares recording in some cases considerable losses, while the share prices and valuations of companies with highly stable business growth benefited greatly from the drop in bond yields. The prices of our positions in Nestlé and Unilever even reached new highs at the end of the month. The increase in the price of gold must also be seen in connection with the change in yields. At current negative interest rates there is no opportunity cost for holding gold. In fact, relative to negative yielding government bonds, gold even generates an opportunity return. The ongoing weakness of the euro was another factor helping the price of gold climb above the previous high in 2012, which also benefited the fund. We remain flexibly positioned and continue to hold an adequate liquidity position of 17.6% in order to take advantage of possible price reductions.

FUND MANAGER

Dr. Bert Flossbach

Dr Bert Flossbach co-founded Flossbach von Storch in 1998, and has been a member of the board ever since. He is responsible for the areas of research and investment management.

"Active, benchmark-independent portfolio management always starts with a blank sheet of paper."

Flossbach von Storch - Multiple Opportunities II - USD-RT

ASSET ALLOCATION AFTER EQUITY HEDGING OVER THE COURSE OF TIME (IN %)*

* The asset allocation shown here is based on the launch date of the oldest share class of the sub-fund as of 1 October 2013.

Source: Depository and Flossbach von Storch, status: 31.08.19

OPPORTUNITIES

- + Flexible investment policy without benchmarking.
- + Risk is broadly diversified by investing in a range of asset classes (e.g. equities, bonds, convertible bonds and precious metals indirect). Market potential can be exploited by investing across a wide range.
- + Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.
- + Derivatives can be used to increase potential yields.
- + Precious metals (indirect) (e.g. in the form of gold) can be used to increase potential yields.

RISKS

- Market risks: The securities in which the Management Company invests the sub-fund assets present opportunities for gain but also the possibility of risk. If a sub-fund invests directly or indirectly in securities and other assets, it is subject to many general trends and tendencies on the markets, which are sometimes attributable to irrational factors, particularly on the securities markets. Losses can occur when the market value of the assets decreases against the cost price. If a unit holder disposes of units in a sub-fund at a time when the quoted price of the sub-fund assets is less than at the time of investment, then the unit holder will not recover the full value of the investment. While each sub-fund constantly strives to achieve growth, growth cannot be guaranteed. The risk exposure of the investor is, however, limited to the sum invested. There is no obligation to make additional capital contributions beyond investors' investments.
- Currency risks: If a sub-fund holds assets which are denominated in foreign currencies, it shall be subject to currency risk. In the event of a devaluation of the foreign currency against the reference currency of the subfund, the value of the assets held in foreign currencies shall fall.
- Credit risks: The fund may invest part of its assets in bonds. The issuers of these bonds could become insolvent, causing the bonds to lose some or all of their value.
- Interest change risks: Investing in securities at a fixed rate of interest is connected with the possibility that the current interest rate at the time of issuance of a security could change. If the current interest rate increases as against the interest at the time of issue, fixed rate securities will generally decrease in value. Conversely, if the current interest rate falls, fixed rate securities will increase.
- Risks relating to the use of derivatives: The fund may enter into derivative transactions for the purposes listed in the KIID and the sales prospectus. This means increased opportunities, but also increased risk of losses. The use of derivatives to hedge against losses may also reduce the profit opportunities of the fund.
- Risks of precious metals and commodities: Precious metals and commodities may be subject to greater price fluctuations. Trading prices may also fall.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net sub-fund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZONT:

Long-term: over 5 years

RISK/RETURN PROFILE

Low risk ← → High risk
Potentially low revenue ← → Potentially high revenue

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The historical data used for calculating the synthetic indicator is not a reliable indication of the future risk and reward profile of the share class. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment. This share class has been placed in the aforementioned risk class because its unit price is subject to medium to significant fluctuation, therefore the profit potential and loss exposure may be moderate to high. Because of the calculation model used, all risks may not be taken into consideration when placing the share class in a risk class. Detailed information can be found in the section entitled "Risks" of the prospectus.
